TELL US ABOUT YOUR CURRENT ROLE AT THE INSTITUTE OF DENTISTRY

I'm part of CDOS and I work with Ken Parkinson to investigate what happens to cells when they become old (including prematurely old), which is known as senescence. We are working to find out how the cell's metabolism changes and how we can use this to monitor the role of senescent cells in ageing and disease.

WHAT HAVE YOU ENJOYED MOST ABOUT WORKING AT THE INSTITUTE OF DENTISTRY?

I really enjoy working in the fantastic facilities in the Blizard Institute but most of all I enjoy working with my colleagues, especially my boss Ken because he supported me throughout my PhD and has given me many opportunities to help develop my career. Being a short walk away from Rinkoff Bakery is also a pretty good reason to work here!

TELL US SOMETHING WE DO NOT KNOW ABOUT YOU

I have disproportionately long arms so I'm really good at retrieving objects from behind furniture (if anyone needs my skills please get in touch).
